Christian Anyikamadu

Frontend Engineer | Lagos, Nigeria
+234 814 299 3740 | anyikamaduchris@gmail.com |linkedin.com/in/anyikamaduchris | github.com/chrixempire

Hi, I'm Christian, a Frontend Engineer with 4 years of experience leading teams and building and shipping products across the web. I've built products across fintech, procurement, SaaS, e-commerce, and marketplace spaces, taking ownership from problem discovery through implementation and delivery. I enjoy solving complex product and engineering challenges, working across teams, and turning ambiguous ideas into reliable, production-ready products that deliver real value.

EXPERIENCE

Frontend Engineer - Bayana (Contract)
Lagos, Nigeria | Jul 2026 – Present
Tools - Javascript, Typescript, React.js, Next.js, CSS, Tailwind CSS

- Owned frontend development for Bayana, a platform connecting verified NGOs with volunteers and donors, working closely with product and design to translate requirements into scalable product solutions and taking features through implementation and production delivery.
- Established and maintained frontend architecture and development patterns that supported codebase scalability, consistency, and effective collaboration across engineers as the product evolved.
- Made technical decisions around component structure, application architecture, API integration, and frontend implementation to ensure new product requirements could be delivered efficiently without compromising maintainability.
- Worked closely with backend engineers to integrate APIs, resolve technical challenges, and align frontend and backend implementations across core product workflows.

Frontend Engineer - Acumen Digital
Lagos, Nigeria | Apr 2025 – Aug 2026
Tools - ,Vue.js, Nuxt.js,Javascript, Typescript,React.js, Next.js , CSS, Tailwind CSS

- Worked across multiple product teams and client engagements spanning fintech, FX, procurement, lending, and marketplace products, translating business requirements and product ideas into production-ready digital experiences.
- Collaborated closely with product managers, designers, backend engineers, QA, business stakeholders, and clients throughout the product lifecycle — from requirements and technical planning through implementation, testing, handoff, and production release.
- Established frontend architecture and development patterns that made products easier to extend and allowed engineers to take over existing workstreams and continue development without rebuilding or re-learning the codebase from scratch.
- Worked across different teams and technology stacks to diagnose product and engineering problems, make practical technical decisions, and keep delivery moving as requirements evolved.
- Participated in technical reviews, debugging, QA resolution, client feedback sessions, and production releases, ensuring that product decisions translated cleanly into stable implementations.

Octupus - Prediction Market Platform

- Developed core experiences for a real-time prediction market, where users discover markets, evaluate outcomes, buy and sell positions, and manage active trades.
- Designed the frontend architecture for real-time product state, ensuring market data, user positions, transaction states, and interface updates remained synchronized as activity changed.
- Built trading workflows covering market selection, stake configuration, position previews, transaction states, confirmations, and live updates across active markets.

Tendar - Lending-as-a-Service

- Worked on Tendar's lending and Buy Now Pay Later products, collaborating with product stakeholders and clients to understand lending operations, KYC requirements, and compliance considerations before translating them into product workflows.
- Worked on development of the KYC experience, covering BVN verification, document submission, and customer identity capture, while adapting the flow to evolving business and compliance requirements.
- Developed lending workflows for loan origination, disbursement, repayment, and collections, helping turn operational requirements into usable product experiences.
- Worked directly with product manager and stakeholders to clarify requirements, identify gaps in existing workflows, and incorporate feedback into product iterations.

Kaorex - Trading & Escrow Platform

- Built core customer and administrative experiences across trading, escrow, live transactions, compliance, messaging, and reviews.
- Implemented the product flows required to move transactions through different stages of an escrow lifecycle, including user actions, transaction states, confirmations, and real-time updates.
- Worked across customer and admin applications to ensure both sides of the transaction lifecycle remained consistent and operationally aligned.
- Collaborated with product, backend, and design teams to identify workflow gaps and redesign critical product experiences as business requirements evolved.

GoPath - Dynamic Form Builder

- Worked on the frontend architecture of a dynamic form builder that allowed non-technical users to create, configure, validate, publish, and distribute custom forms without engineering support.
- Designed a flexible schema-driven approach for rendering and managing dynamic form structures, allowing the same product architecture to support different field types, configurations, validation rules, and publishing workflows.
- Built the configuration experience around the underlying form model so that users could modify complex form structures without requiring bespoke frontend implementations for each new form.
- Worked with product and engineering stakeholders to simplify a technically complex workflow into an interface that could be used independently by non-technical users.

Frontend Engineer - Independent Purchasing Company – Africa
Lagos, Nigeria | Nov 2022 – Mar 2025
Tools - Vue.js, Nuxt.js,Javascript, Typescript,React js, CSS, Tailwind CSS
Papa's Grill - Market Validation & MVP

- Worked on Papa's Grill's ordering and administrative platform as an initial product experiment to validate the business model and understand how customers and operators would interact with a digital ordering system.
- Helped turn the initial business idea into a working MVP, allowing the team to test the market, gather real usage feedback, and make informed decisions before committing further engineering resources.
- Used insights from the MVP to identify opportunities for a broader inventory and business management platform, providing the foundation for the development of Daash.

GoSource - B2B Food Procurement Platform

- Initially supported the engineering team building GoSource, contributing frontend engineering capacity across procurement, checkout, payments, order management, and administrative workflows.
- Worked alongside the primary engineer to resolve implementation challenges, accelerate feature delivery, and move critical product functionality from requirements into production.

Daash - Inventory Management SaaS

- Collaborated with engineering and product teams to transform the lessons from the Papa's Grill MVP into Daash, an inventory and business management platform designed for restaurants and retail businesses.
- Contributed across the frontend architecture and core product workflows, working on inventory, orders, payments, business operations, and customer-facing experiences.
- Worked closely with product and engineering to identify gaps from real-world usage, translate customer feedback into product improvements, and evolve the platform beyond its initial MVP.
- Following Daash's launch and adoption in the market, collaborated with **Eat & Go** to white-label the platform for its **Cold Stone and Pinkberry** brands, extending Daash's capabilities to support new business requirements and operating models.

GoSource - Product Redesign & Frontend Ownership

- After Daash reached a stable stage where the product team could continue its development independently, was brought back to GoSource to take ownership of the product's frontend direction and redesign.
- Reworked the product's core flows and frontend structure, using lessons from the Papa's Grill MVP and Daash to improve the overall product experience and align the platform more closely with business and user needs.
- Worked closely with backend engineers to translate product requirements into clear frontend-backend contracts, establish a structured frontend architecture, and ensure both sides of the system evolved together.
- Championed the frontend implementation from product requirements through design interpretation, technical planning, development, integration, and production delivery.
- Made architectural and product decisions that created a more maintainable foundation for the team to continue building on as GoSource evolved.

Other Products and Collaborations

PostHearts

Lagos, Nigeria | April 2025 - Dec 2025

Tools - Javascript, Typescript, React.js, Next.js, CSS, Tailwind CSS

- Contributed to PostHearts, a digital letter-making platform that lets users create personalized digital letters using custom typography, photos, backgrounds, stickers, emojis, and other interactive elements.
- Worked across the product alongside other engineers and designers, contributing to the frontend experience and helping turn the concept into a polished, production-ready product.

Quality - Real-Time Feedback Platform

Lagos, Nigeria | Aug 2025 – Present

Tools - Javascript, Typescript, React.js, Next.js, CSS, Tailwind CSS

- Contributed to Quality, a real-time collaboration and feedback platform that enables teams and AI agents to leave contextual feedback directly on web products and communicate around issues and improvements.
- Worked across the product with other engineers and contributors to build and ship the platform's core feedback and collaboration experience.

SKILLS

PRODUCT & ENGINEERING

Product Development · Feature Ownership · Technical Problem Solving · Product & Frontend Architecture · Technical Decision-Making · Cross-functional Collaboration · Code Review · Technical Mentorship

TECHNOLOGIES

React · Next.js · Vue · Nuxt · TypeScript · JavaScript · Tailwind CSS · REST APIs · WebSockets · Git · CI/CD

TESTING

Vitest . Vue Test Utils .Unit & Component Testing

ENGINEERING PRACTICES

Real-time Systems · State Management · Performance Optimization · Testing · Production Delivery

EDUCATION

Olusegun Agagu University of Science and Technology

B.Eng. Electrical and Electronics Engineering - *2018 – 2023* - ***First Class Honours***
